PREPARATION & FRAMEWORK DESIGN

GENERAL PREPARATION GUIDELINES FOR ALL-CERAMIC RESTORATIONS SHOULD BE FOLLOWED (FIG. 1 & 2):

1. Preparation should follow the anatomy of the tooth, providing at least the minimum thickness required for the respective restoration.
A 1.0 mm axial and occlusal reduction is considered ideal for full contour zirconia restorations.
2. A definitive finish line (shoulder with rounded internal line angles or chamfer) is recommended.
3. All sharp edges and line angles should be rounded.

Powerful Choices
