

Pow Pointers

March 2011

*Joe Steiner,
Team Leader Fixed*

*Agnieszka Kudzia,
Team Leader Ortho*

The IMPAK PF can offer:

- A comfortable fit
- Greater patient compliance
- Greater treatment success
- Less chair side adjustments
- Reduction or elimination of fractures
- Provide added protection against:
 - Bruxing and clenching
 - Chipping
 - Severe wear to teeth including those beautiful restored crowns, bridges and veneers

For optimal results in protecting your restorations Joe Steiner, Team Leader Fixed and Agnieszka Kudzia, Team Leader Ortho suggest Pow Laboratories Inc's Impact PF splints:

Once in awhile, we have patients whose demands and expectations compromise some of the laws of nature. We know the porcelains and the cements are extremely strong when everything has been done properly. Through experience and knowledge we also know that there is a chance of failure when we are asked to prepare or bond materials that have been compromised because of patient wishes. There is a solution to this dilemma if it is explained to the patient that there are stipulations when the restorations are placed. Appropriate appliances must be worn to protect the restorations.

Your option to protect these patients is an Impak PF splint. These appliances are manufactured from a thermoplastic material that can be adapted for the patient's specific needs. They can vary from a rigid product to one that has significant flexibility.

Pow Laboratories Inc is proud to offer with every Impak PF splint

- **6 month warranty from date of manufacturing;**
- **3 Day in lab turn around time;**
- **Shipping paid both ways;**
- **Quality service and price.**
- **Retainer case**
- **Name tag in appliance**
- **Product information card**

Powerful Choices

Pow is making some exciting changes.....

Watch for the final results and how this will benefit you and your patients!

Pow Seminar

On Friday Jan 28th, Pow Laboratories hosted a full day hands-on implant seminar that was co-sponsored by Astra Tech Dental. Dr. Jason Bortolussi, DDS, MS, FRDC (C) and Mr. Don Kolotyluk, RDT, CDT presented "Simplified Restorative Options for Predictable Results with Dental Implants". The course

featured the importance of implant design, biomechanics and abutment options for optimum results. The attendees participated in a hands on component which featured impression taking and the restorative process from temporization to the final prosthesis.
